Grow Beans in a Bag

Supplies provided:
- Ziplock bag
- Cotton balls
- Beans

Other supplies needed:
- ✔️ Water
- ✔️ Permanent marker (optional)
- ✔️ Tape (optional)

Directions:
Saturate the cotton balls with water. Place wet cotton balls into the bottom of your Ziplock bag. Place your seeds in the bottom of the bag as well, making sure they are against the wet cotton balls. Do not seal the bag. Put your bag in a sunny indoor location and wait for your seeds to grow!

Optional:
Tape your bag to a window in your home.

Kids will learn how temperature, air, water, and light help signal a seed to germinate. They can also make observations and write down changes to their seed and seedling daily.

Happy growing!
