Paper Plate Weaving

Items Included:
Paper plate, craft yarn

Directions:

- Use scissors to cut 2 inch slots around your paper plate. The more slots cut, the more complex your finished design.
- Tie a knot around the end of your yarn and thread it through one of the slots - the knot should be large enough to keep the yarn in place as you weave.
- Begin threading your yarn through the slots you’ve cut. Experiment! How many geometric shapes can you make? Do you want to make something asymmetrical, symmetrical, abstract, representational?
- Complete your design by knotting the other end of your yarn and threading it through the last slot.

This fun activity will help you learn about art, design and geometry!
